SaubhagyaSapkota

Summary

Passionate and Detail-oriented Developer with a strong foundation in programming, full-stack web development, and machine learning. With a focus on building scalable, user-centric applications, I thrive on solving complex challenges, managing time effectively, and collaborating seamlessly in diverse teams.

Technical Skills

Backend & APIs: Node.js, Express.js, TypeScript, Django

Database Management: PostgreSQL, MongoDB, MySQL

Programming Languages: JavaScript, TypeScript, Python, C/C++

Tools: Git, GitHub, Postman, pgAdmin 4, MongoDB Compass, Vercel, Figma

Soft Skills: Communication, Co-ordination, Teamwork, Time management, Documentation (LaTeX)

Education

Lalitpur Engineering College

Bachelor in Computer Engineering

2021 – 2025

Chakupat, Lalitpur, Nepal

Experience

Upachaar Nepal Pvt. Ltd.

June 2025 – October 2025

Software Developer Intern

Basundhara, Kathmandu

- Developed and maintained RESTful CRUD APIs for various healthcare services, improving backend efficiency and data management.
- Implemented authentication and authorization using JWT, role-based and permission-based access control to ensure secure user access.
- Integrated APIs with database models (e.g. MongoDB) ensuring seamless data flow and optimized query performance.
- Worked closely with frontend developers to design scalable API endpoints aligned with UI/UX requirements.
- Gained hands-on experience with REST architecture, API integration, and secure backend development in a real-world medical domain.
- Collaborated with team members using version control systems such as Git and GitHub to organize modifications and assign tasks.

Projects

Identity and Access Management | *TypeScript, NodeJS, ExpressJS, PostgreSQL*

November 2025

- Build a production-ready authentication system with registration, secure login, email verification, and session logout flows.
- Implemented JWT-based authentication with access token and refresh token rotation, stored and validated through server-side sessions.
- Designed role-based and permission-based access control for fine grained authorization and protected API resources using custom middleware.

Birdy: AI powered Mobile Application for Bird Identification | *React Native, Python, Django, SQLite*

March 2025

- Created a functional bird identification system using react native for frontend and Django Framework for backend.
- Identify bird based on their sound and provide related information about the birds.
- Contain features for recording bird sound in real time through the app and upload the audio recording for predicting.

JobsSearch: A full Stack Web Application | *MongoDB, ExpressJs, NodeJS, React*

July 2023

- Developed a comprehensive job listing platform using the MERN Stack
- Implemented features include user authentication, job posting, job search functionality, and real-time notifications.
- Integrated RESTful APIs and designed a responsive UI/UX to ensure compatibility across various viewports.

Small and Fun Projects | *MongoDB, ExpressJs, NodeJS, React*

August 2025

- Quick Note:** A simple application for taking simple notes developed using MERN stack.
- Movie Search:** A small React application that allows users to search for movies, and manage a list of their favorite films saved locally in the browser.
- Memory Card Game:** A simple memory card game build using basic HTML, CSS and JavaScript.

Certificates

- AWS Certified Cloud Practitioner
